

# **FieldLynx**

### Quick Start Guide

#### Introduction

The following guide will walk you through the installation, database setup and use of FieldLynx followed by event-specific setup for Throws, Horizontal Jumps, and Vertical Jumps. If at any point you need additional help, please contact Tech Support@finishlynx.com.

#### Step 1 Installation

- Locate the FieldLynx installer (FL 1.71.exe) from the CD, USB drive or the download the program from www.finishlynx.com
- Right-click on the installer and click Run as Administrator.
- c. Follow the prompts to complete the install.

## Step 2 Configure the Computer/Tablet Network Settings

- From the Windows start menu search for the Network and Sharing Center.
- b. Click Change Adapter settings.
- c. Right-click on the Wi-Fi connection; select **Properties**.
- d. Select Internet Protocol Version 4 (TCP/IPv4) then Properties.

e. Select **Use the Following IP address:** and enter the desired IP address of the computer.

**Note**: Finishlynx tablets will typically be assigned as 192.168.0.100 and up.

- f. Enter the subnet mask of 255.255.255.0
- g. Click **OK** and close the windows.

 Connect to the access point from the list of available Wi-Fi connections.

### Step 3 Disable the Windows Firewall

- Search for the Control Panel from the windows start menu.
- Find Windows Firewall.
- c. Select Turn Windows Firewall on or off.
- d. Turn off the firewall for each connection type.

#### Notes:

- The firewall may be controlled by antivirus software which would need to be removed before turning the firewall off.
- Alternatively, you can allow the FieldLynx program through the firewall.

### **Step 4** Configuring the Database Options

- a. Open the FieldLynx Program and navigate to **Options / Preferences**.
- b. Click the **Database** tab.
  - i. Select how often to update the database.

- c. Click the Communication button.
  - i. Set the IP address to that of the computer running NetExchange.
  - ii. Set the port to the same number listed in NetExchange.

- d. Load an event by clicking
  - Click load schedule and select the desired event.
  - Alternatively, you can enter the Event-Round-Heat number of the desired event.

# **Event-Specific Information**

Setting up the events will differ slightly depending on the type on event.

See the specific event setups below.

#### **Event 1 Throws**

- c. Choose Metric or English.
- Set up the attempts.
- If laser measurement is used, select the circle radius and set the control measurements

## **Event 2 Horizontal Jumps**

- a. Choose Metric or English.
- b. Set up the attempts.
- c. Set the boards and each boards offset from the first board.
- d. If laser measurement is used, set the control measurements measuring the distance to the near and far side of the board

**Note:** You can set an athlete's board when checking each individual athlete

#### **Event 3 Vertical Jumps**

- Setup Measurement System: choose Metric or English.
- b. Set the Alive Groups.
- c. Enter the starting height, end height, and intervals. Click Apply.

#### Notes:

- Athlete starting heights can be entered when checking individual athletes in.
- Bar heights can be edited from the Event menu.
