

Silver Package

The Rowing and Paddling Silver Package is a mid-level solution from Lynx that contains everything you need to capture clear and accurate time-stamped finish line images. The Silver Package includes the **EtherLynx Vision PRO** photo-finish camera with Extended Zoom and a remote zoom lens. It not only captures 1,000 frames per second, but also boasts a vertical image resolution of 2,048 pixels—meaning no finish line is too wide to be covered. The Vision PRO also includes EasyAlign video alignment, an on-board level, LuxBoost low-light capture mode, and Electronic Filter Control for excellent flexibility in difficult light conditions.

The Silver Package also includes the RadioLynx wireless start system. RadioLynx is extremely popular among rowing timers because it allows an accurate start signal to be sent wirelessly to a finish line located up to **5 km** away. The Silver Package is an excellent solution for rowing, canoe, kayak, and dragon boat races. It combines a powerful timing camera, wireless start system, and everything else you need to produce fast and accurate results at any size competition.

Components

- **Camera: EtherLynx Vision PRO**, color, timer-enabled, **1,000** frames per second, extended resolution/zoom for up to **2,048** vertical pixels
 - **EasyAlign 2-D Video Alignment Mode**
 - **Internal RadioLynx**
 - **On-Board Level & Electronic Filter Control**
 - **LuxBoost Low-Light Capture Mode**
 - Remote Control 12.5-75mm C-Mount Zoom Lens
- Super Head Clamp, Geared Mounting Head, and Tripod for precision adjustment
- All-inclusive Camera & Start Cable set with Capture Button, Ethernet Hub, and USB-to-Serial Converter
- **RadioLynx** Wireless Start System - Extended Range
- Custom carrying case
- **LynxPad** – Event management software
- **FinishLynx 32** – Multi-language* photo-finish results software
 - RadioLynx Wireless Start Plug-in

* See website for current listing. FinishLynx available in English, Spanish, French, Arabic, German, Italian, Korean, Portuguese, Russian, Swedish, Finnish, Chinese (Simp.), Chinese (Trad.), and Japanese.

Silver Package Features

- The Vision PRO camera includes a remote control zoom lens and offers 1,000 fps captures with 2,048 vertical pixels for clear and accurate photo-finishes on even the widest courses.
- The RadioLynx wireless start system promotes operator flexibility by allowing the start sensor to be operated wirelessly from several kilometers away.
- LuxBoost mode enhances the available light to allow for better image captures in low-light conditions.

Silver Package Benefits

The Silver Package is a great choice for most organizations because it offers the features of a professional system at a very reasonable price. The one component that truly elevates it above the Bronze Package is the Vision PRO camera. It offers several upgrades over the standard Vision, including higher frame rates and vertical resolution, LuxBoost low-light capture mode, an on-board level, and Electronic Filter Control.

The Vision PRO not only captures more accurate results (1,000 fps), but also provides better quality photo-finish images at wide finish lines and low-light conditions. According to FISA, the ideal course width for championships and regattas “shall be *at least* 162 meters” (2005). The Vision PRO captures these widths with ease and still leaves plenty of room for variations in the camera setup location.

The Rowing Silver Package

A second key addition to the Silver Package is the RadioLynx wireless start system (and the corresponding software plug-in). Just as the Vision PRO adds a huge degree of flexibility for course and event variations, RadioLynx provides more freedom with start/finish line locations and accessories. The wireless start transmitter beams an accurate, real-time signal to the Internal RadioLynx receiver located up to 5 km away at the finish line. This feature can be especially useful when the start of the event takes place on a floating pontoon. Also, because standard rowing courses are 500, 1,000, or 2,000 meters in length, the extended range RadioLynx can easily span an entire course.

In addition to the high-resolution camera and wireless start system, the Silver Package includes all the software, cables, and other features necessary to run the system *out-of-the-box*; all you need is a Windows-based computer to run FinishLynx software. Thanks to the program's open-interface design, FinishLynx is also compatible with hardware and software from a long list of third-party manufacturers, including the popular **Regatta Master** management software. The Silver Package includes a variety of powerful photo-finish features designed especially for rowing. There is also room for a number of upgrade or enhancement opportunities. As your needs change over time, you can add multiple cameras, scoreboards, split timing devices, GPS-synchronization, or higher capture speeds. The Silver Package is an excellent long-term investment for any size club.
