FINISHLYNX CHAMPIONSHIP ELITE PACKAGE
QUICK START GUIDE
FOR ETHERLYNX VISION CAMERAS

Championship Elite

Updated March 2016
Quick-Start Guide - FinishLynx Championship Elite Package Timing System

Please verify that your FinishLynx Championship Elite System contains all the components pictured here. If something is missing, or if you have questions setting up your system after following this quick start guide, call: 1-800-989-LYNX. For additional tech support documents and downloads, visit www.finishlynx.com/support/

</table>

Be sure to keep your USB flash drive safe. It includes your Serial Numbers, Software, & Quick-Start Guides. To access the files, insert the flash drive in your computer and click on START.html

**Items not included**

- **Laptop or netbook** computer running Microsoft Windows. Your computer needs: 1 available serial port (or USB port with serial adapter) and 1 available Ethernet port. A **printer** is also optional.
Introduction

In this QSG, you will learn how to configure the FinishLynx network, set up the dual-angle EtherLynx Vision cameras and align them with the finish line using the remote control features. You will also learn how to capture, evaluate, and print a FinishLynx results image, configure FinishLynx to work with the scoreboard, and import a start list created in LynxPad.

Step 1: Go to the track

Bring your FinishLynx system (and an assistant) to the track. Make sure there is power available for your computers and for the Power over Ethernet switch. The EtherLynx Vision camera and the IdentiLynx camera will receive their power via the Ethernet data cables.

Set up a table near the finish line, ideally on the infield if power is available. The finish line should have black lane markers painted or taped on the finish. If not, we suggest you use black matte tape to designate lane lines. This will help you align the camera and get clearer images.

Step 2: Install the software

A. FinishLynx Software & Plugins

Insert the Lynx USB flash drive in your computer and click on START.html to access the software installers and serial numbers. You can also download the latest version of FinishLynx on our website: www.finishlynx.com/product/software/finishlynx-results-software/

Install FinishLynx, the RadioLynx Plugin, ACM Plugin, and NCP Plugin from the flash drive. When prompted, enter the serial numbers found inside the flash drive.

1. Start FinishLynx by clicking the Windows Start button and selecting All Programs | FinishLynx.
2. Verify that you have correctly installed the RL, ACM, and NCP Plugins by clicking Help from the Menu bar and selecting About.... When the About FinishLynx dialog appears, the RL, ACM and NCP Plugins are listed with the serial numbers you entered during installation.

B. LynxPad

Install using the Lynx USB Flash Drive or download the latest version of LynxPad at: www.finishlynx.com/product/event-management/lynxpad/

Follow the instructions on your screen to install LynxPad. When prompted, enter the serial number found on the flash drive.

Note: You should Right Click on the installer and select Run as Administrator to install LynxPad, if you do not, you will not be able to print from LynxPad.

Step 3: Evaluate a sample image

1. Start FinishLynx. Click File - Open....
2. Double-click Sprint.evn to open the sample event.

Note: This sample is a two-camera image. Your Championship Elite System uses only 1 line-scan camera and produces single-camera images.

3. Click the mouse once on the torso of a competitor on the left side of the screen. A red hairline appears. Enter the lane number for the athlete in the identification box.
4. Press the Enter key on your computer. The finisher’s time appears in the start list above the image.
5. Repeat these steps for all of the competitors on the screen. You have just successfully evaluated a race in FinishLynx.
6. Click File | Close window. If you want to reuse the image later for practice evaluation, click No when asked to save your changes. Close FinishLynx.

Step 4: Configure the network for Windows OS prior to Windows 7 (See Step 5: below for Windows 7, 8 and higher)

1. Click the Microsoft Windows Start button and select Control Panel, or click Start | Settings | Control Panel.
2. Double-click Network Connections.
3. Right-click the Local Area Connection associated with the network interface card (NIC) in use and select Properties. The Local Area Connection Properties dialog appears.
4. Make sure you see a line that reads, Internet Protocol (TCP/IP). You may have to scroll down to see it.
   a. Click Install and select Protocol.
   b. Click Add....
   c. Click to select the Microsoft TCP/IP option and then click OK.
5. Check the box next to Internet Protocol (TCP/IP).
6. Click to select Internet Protocol (TCP/IP) and then click Properties. The Internet Protocol (TCP/IP) Properties dialog appears.
7. Click the Use the following IP Address: button and then type the following numbers:
   - IP address: 192.168.0.5
   - Subnet mask: 255.255.255.0. Click Ok and then click Ok again.
8. If you are running Windows XP, follow these steps to disable the firewall. Otherwise continue to Step 6:
   a. Open the Windows Network & Sharing Center.
Step 5: Configure the network for Windows 7 & 8 (if applicable)

Note: Sections 1 and 2 should be completed on both FinishLynx and Meet Management computer.

1. Go to the Windows Control Panel. On the top right is View By with a drop down arrow. Click the drop down arrow and choose Small or Large Icons.
2. Find and double click on Network and Sharing Center. They are listed alphabetically by icon name.
3. This will open the Network and Sharing Center. On the left is a blue section titled Control Panel Home.
4. Click on the Change Adapter Settings icon.
5. A new window will open displaying your network connections. Right click on the Wireless Network Connection and select Disable from the list of items. This is only necessary for the FinishLynx Capture computer.
6. Right click on the Local Area Connection and select Properties from the list of items. A new window will appear with a list of connection items. Click to select Internet Protocol Version 4 (TCP/IPv4) and click the Properties button.
7. A Properties window will appear and is typically set to Obtain an IP address automatically. Click to select the radio button for Use the following IP address. In the box for IP address, enter 192.168.0.5 for FinishLynx and hit Tab key to auto fill in Subnet mask 255.255.255.0
8. Click OK and navigate back to the Control Panel. In the control panel click on the Windows Firewall icon. Under Control Panel Home, on the left, click on Turn Windows Firewall on or off.
9. Turn off both Home and Public Firewalls (Domain for Windows Pro).

Step 6: Set up the Primary camera and tripod

Setup the tripod in line with the finish line, preferably on the infield and approximately 10 feet back. Note: Minimum recommended camera distance from track is 8 feet (at this distance you may not be able to see the feet of the athlete in Lane 1 – being able to see the feet is not a requirement for accurate timing on the Torso of the athlete). If you need to be closer than this you may have to use the optional 6mm lens supplied with your Championship Elite package.

Step 7: Attach the camera to the tripod

1. Secure the remote positioner to the camera bottom by turning the black handled thumbscrew. Make sure the FinishLynx label faces in the same direction as the camera lens will face.
2. Connect the cable that comes with the remote positioner to the port on the positioner and the port on the back of the camera labeled Remote.
3. Connect the cable on the remote lens to the remaining serial port on the remote positioner.
4. Secure the geared head to the top of the tripod.
5. Note how the mounting plate is attached to the top of the geared head. Then, pull back on the lever at the top of the geared head to release the mounting plate.
6. Tighten the mounting plate to the bottom of the remote positioner by turning the screw with a flathead screwdriver. Make sure the Lens marking on the bottom of the plate is facing the front of the remote positioner (where the Lynx label is affixed).
7. Attach the camera with the remote positioner and mounting plate to the tripod by clicking the mounting plate into place on the geared head.

8. With the camera lens lined up with and facing the finish line, make minor adjustments to the tripod legs so both bubbles on the tripod are centered.

9. Turn the black knob on the geared head that controls the tilt of the camera so that it is at about a 30 degree angle to the ground.

**Step 8: Connect the cables**

![Cable Diagram]

1. Connect the female end of connection box cable to the port on the back of the camera labeled **Connection Box** and the male end to the left side of the connection box.

2. Connect an Ethernet cable between the back of the camera labeled **POE 10/100/1000** and a port on the Power over Ethernet switch.

3. Connect an Ethernet cable to the network connection on your computer and the other end to a port on the Power over Ethernet switch.

4. Connect the male end of the start sensor cable to the connection box where it says **Start**. Attach the start sensor to the other end of the cable and keep the start sensor close by.

5. Connect the button splitter to a 9-pin serial port, or a USB port with the supplied adaptor, on your computer.

6. Connect the capture button cable to the 9-pin serial port on the button splitter that is labeled **Capture Button**.

7. Depending on the distance between the scoreboard and your computer or camera, connect the scoreboard serial cable, either to the **Serial Port** on your Connection box, or to the other 9-pin serial port on the button splitter.

8. Turn on the camera by pressing an d holding the power button on the back plate.

**Step 9: Align the Primary camera**

**Note:** The EtherLynx Vision camera can be aligned using either 1-D mode or 2-D EasyAlign mode. We recommend using EasyAlign. If you are using an older model EtherLynx camera, however, it must be aligned using classic 1-D mode.

**NOTE** If running a wireless Ethernet card on your computer, we recommend that you disable it while the camera is booting.

**Start FinishLynx.** Wait while the green status bar in the lower right corner of the screen completes its cycle.

**Align Vision Camera in EasyAlign 2-D Video Mode**

1. **Activate EasyAlign** by clicking on the 2D align Icon in the top left hand corner of the FinishLynx Hardware Control screen.

   The icon turns green and the 2-D video viewer appears within the software. The 2-D viewer makes it easy to see how your camera is aligned on the finish. **The goal is to align the green vertical line with the painted finish line and near its front edge.**

2. **Adjust Remote Lens/Positioner Controls** - Adjust the remote lens/position controls on the right of the FinishLynx hardware control screen.

   ![Remote Control Screen]

   **Center Remote Camera Positioner**

   Click to center the camera automatically using the remote positioner.

   **Remote Camera Tilt, Pan & Swivel**

   Use the remote **Tilt**, **Pan**, and **Swivel** buttons to adjust the orientation of the camera on the finish. You want to ensure that the green vertical line is perfectly aligned on the white finish line and that all lanes are visible in the viewer.
Have your assistant run through the finish line and watch where he/she appears on the computer monitor. The goal is for the runner’s torso to be fully visible in both the inside and outside lanes. Once the camera’s position is correct, you can then optimize the remote lens settings.

**Remote Iris (adjusts amount of light in lens)**
Open or Close the remote iris to bring the ACM value as close to 1 as you can by clicking and holding the remote Iris buttons.

**Remote Focus (adjusts near/far image focus)**
Click and hold the 
and 
buttons on the keypad on the right of the FinishLynx screen until the image becomes crisp. Start by focusing on the far lane and adjust until all lanes are in focus. Ensure that athletes in all lanes (near and far) are in focus.

**Note:** If you are having a hard time getting crisp focus, try opening your lens iris and allowing the AGC to drop closer to zero.

3. Once the camera appears to be aligned, **Click**, the green alignment icon to close 2D alignment and then click on the red 1-D alignment icon.
You will know when your camera is aligned on the finish line because the 1-D image will be primarily white. See image below for proper 1-D alignment. If you followed the steps closely in 2-D align, the camera should already be aligned in 1-D mode as well:

![Image](image-url)

**Step 10: Adjust Primary camera settings**

1. Click **Camera Settings Icon** to open the Camera Settings dialog.
2. Click to select the **Setup** tab:
   a. **Name**: enter a name to identify the camera(s)
   b. **Image Orientation**: select the correct orientation for finish (infield would be Left orientation)
   c. **Identify By**: select Lane for track **competition**
   d. **Lanes**: enter the number of lanes on the track; the remaining should be left as default.
3. Click to select the **Parameters** tab
   a. **Rate**: type a value in the field between 800-1000 for sprints (400m and under) or type 600-800 for distance events. Change this value when moving between sprints and distance races, or else the competitors in your FinishLynx image appear distorted.
   b. **Frame Height**: will **vary** by camera models, 640 is recommended for most track competitions;
   c. **Gain Method**: set to **AGC** for outdoor light and set to **Manual** during the alignment process and for artificial light. Adjust the value based on quality of image in alignment mode.
4. Click to select the **Inputs** tab:
   a. **Start Sensor**: is defaulted to **Closed** for the wired gun start. If using the Radiolynx then set **Start Sensor** to **None** to turn off the wired start (they are independent of each other).
   b. **Photo Eye**: if using ACM to stop the scoreboard display, set it to **Internal**.
5. Click to select the **RadioLynx** tab:
   a. **Port**: select appropriate port where the Radiolynx receiver is plugged into (camera back is common for newer model cameras)
   b. **Setup ID**: should be 000 and select Start Sensor on the next line, **Name**: will fill in automatically with Start 000.
6. Click to select the **Capture** tab:
   a. **Capture Method**: select **Manual** if using the Capture Button or **Automatic** if using ACM plug-in (both methods can be active at the same time by selecting both).
7. Click **OK** to close the **Camera Settings** and it is advised to restart the FinishLynx software.
8. Set **White Balance**
   a. Open a **new** event in FinishLynx by clicking in the top left corner of the screen.
   b. Capture a small amount of image containing a white object, such as a **person** wearing a white t-shirt.
   c. Right-click and draw a box around a small amount of the **white** image. You may need to zoom in to the image to do this.
   d. Click **Image** from the Menu bar and select **Set | White Balance**.

**Step 11: Setup Reverse Angle camera**
Repeat Step 6: through Step 9: for second Vision camera

**Step 12: Create a shared directory for FinishLynx and LynxPad**

1. Right-click on your computer desktop and select **New | Folder**. When the **New Folder** appears, change the name to **Practice competition**.
2. In FinishLynx, click **File | Options...** Click the **Browse** button on the **Event Directory:** and navigate to the **Practice competition** directory you just created. Then, click **Ok.**

3. Still in FinishLynx, click **File | Options...** and click the **Database** tab. Click the **Browse...** button next to the **Output Directory:** and navigate to the **Practice competition** directory. Then, click **Ok.**

4. Now, start LynxPad by clicking the Windows **Start** button and then **All Programs | LynxPad.**

5. Click **File | Options...** and **uncheck** the **Load Existing Results on Program Start** box. Then, click **Ok.**

6. Open the sample competition by clicking **File | Open.** Navigate to **C:\LynxPadData\Sample** and then double-click the **lynx.cmp** file. A practice competition opens on the screen.

7. Still in LynxPad, click **File | Options....** Click the **Browse** button next to the **Directory:** text field. Navigate to the **Practice competition** file you created earlier. Select it and click **Ok.** Click **Apply** and then click **Ok** again.

8. Still in LynxPad, click **File | Save as...** and navigate to the **Practice competition** folder. Then, click **Ok.** Now, FinishLynx can get start lists created in LynxPad, and LynxPad can import results generated by FinishLynx.

---

**Step 13: Mount & Install IdentLynx camera**

Follow the instructions on the separate IdentLynx QSG.

**Step 14: Setup RadioLynx wireless start**

Follow the instructions on the separate RadioLynx QSG.

**Step 15: Connect the Wind Gauge & Display**

1. Connect the serial data cable supplied with the Wind Gauge to the DB9 port marked **Serial** on the SeriaLynx unit.
2. Connect an Ethernet cable between the Ethernet port on the SeriaLynx unit and **Port 5** on your Hub
3. Connect Wind Gauge 12v cables to the SeriaLynx Battery Pack
4. Connect the serial data cable supplied with the display to the DB9 port marked **Display** on the SeriaLynx unit
5. Open the FinishLynx software.
6. Power on the MicroTab LED display.

**NOTE:** If connecting either device to your computer using a USB to Serial Adapter, plug it into the USB port before booting FinishLynx software.

**Step 16: Configure Scoreboard Settings**

1. Go to **File | Options** and select the **Scoreboard** tab from the options window.
2. Click on **New** to create a scoreboard or new scoreboard listing in the status window.
3. Click on the dropdown for **Script** and select the **uTabLED.iss** from the list (alphabetical listing)

---

**Step 17: Setup Wind Gauge**

1. In FinishLynx, go to **File | Options**
2. Select the **Wind** tab.
3. From the **Wind Module:** drop-down list, click to select **Lynx** Then, click **Ok.**
4. In the **Serial Port** drop-down list, click to select **Network (Connect)**
5. Enter the **Port** and **IP Address** settings that are on the label on your SeriaLynx unit.
6. In the **Default Mode** drop-down list, click to select **100M**
7. Click **Ok.**
8. Exit FinishLynx and then restart it to save the settings.
Step 18: Automatic Capture Module (ACM) Setup and Operation

A: Using ACM to Stop Running Time
The following information will help to setup the ACM feature for stopping or pausing the running time with each race.

1. In the Hardware Control window, click on the Camera Settings (blue circle with white “I” in upper left).
2. In the Camera Settings, click on the Inputs tab and set Photo Eye to Internal.
3. Next, click on the Capture tab and set Capture Method to Automatic.
4. Click OK and close the Camera Settings.
5. Click on File | Options and the select the Scoreboard tab.
6. Confirm that the scoreboard is setup properly as show above.

B: Manually Control ACM:
1. Click on File|New to create a new blank event or click on the Create New Blank Event button in the upper left.
2. In the Event Window make sure there is an A for Armed and S for Scoreboard and it says Armed to the right of the race clock (when using ACM the C for capture will not show until capture is enabled).
3. Create a start for the event and confirm that the running time is showing on the uTabLED display.
4. Click the Capture icon to enable capture and then hit the Ctrl+F keys and it will say Finishing to the right of the race clock (click on Scoreboard Menu for shortcut keys).
5. Have someone run through the finish line and the camera should capture image and the running time should stop and display the time to the hundredths.

NOTE: In multi-lap races you can use Alt+P to pause the running time as competitors pass in front of the camera.

C: Automatic ACM Setting:

NOTE: Autobreak settings will occur automatically for every race so play with your settings to make sure it fits the way you want to handle each race, even multiple-lap races.

1. Go to File | Options and select the Scoreboard tab.
2. Under Running Time on the third line is Autobreak, these settings allow it to occur automatically.
3. Selecting Finish and If Capturing will cause the running time to stop when ACM is on and the competitors cross the finish line.
4. Selecting Pause but NOT If Capturing will cause the running time to Pause each time competitors cross the finish line in multi-lap races when capture is not enabled.

Step 19: Use FinishLynx with LynxPad Data

1. In FinishLynx, click to load the schedule of events from LynxPad. The Go To Event dialog appears.
2. Click the Load Schedule button once. Click the drop-down list under the Load Schedule button. A list of events appears. Click to select the “110 Meter Hurdles Men (9, 3, 1)” event in the list, and then click OK. The first heat of the third round of the men’s 110m hurdles opens on the FinishLynx screen.
3. Either use a starting gun, or knock the sensor sharply against a hard object - this simulates the firing of the starting gun and starts the yellow FinishLynx timer.

4. Have your assistant run through the finish line while you press down and hold the red capture button to capture the image. Release the button as soon as he/she has run completely through the finish line.
5. Practice evaluating the image by following the same steps you followed earlier in Step 3:
6. Click File | Save to save the race to the Practice competition directory.
7. Crop space between competitors in your FinishLynx image by right-clicking and drawing a box around the unwanted space. Release the mouse button and select Crop from the dialog that appears.
8. (Optional) Print the results and a portion of the FinishLynx image by right-clicking on the image and drawing a box around the portion you want to appear in your printout. For example, the first place finisher or a close finish between two competitors. Click Ok and then select the printer from the Print dialog to send the image with results to the printer.
9. Click File | Close window and then click Yes to save changes you made to the FinishLynx image when you cropped it.
10. In LynxPad, click to highlight Men 110 Meter Hurdles in the Events window. The start list appears in the Heats window.
11. Still in LynxPad, click Competition | Refresh All Results. The results from the race you just evaluated appear in LynxPad.

This completes the FinishLynx Championship Elite System Quick Start Guide.

Looking for more resources? Visit our YouTube Channel for setup and support videos.
